Project sanction details

Bombay Natural History Society has procured necessary permissions from Ministry of Environment and Forests, Government of India and Department of Environment and Forests, UT of Lakshadweep to undertake research work on giant clams.

MoEF approval/sanction

F. No. 20-3/2003-WL-I dated 10th March 2004

Department of Environment and Forests Lakshadweep approval/sanction

F. No. 8/2/2004-E & F/396 dated 11th February 2004

Darwin Project Sanction

Project Ref Number: 162_13_029

Contents

- What are Giant Clams?
- Classification of Giant Clams
- Living species of Giant clams
- Status of Giant Clam species as per IUCN categories¹
- Protection Status of Giant clams in India
- Distribution of Giant clams in India

- Study Site: Lakshadweep Archipelago

- Methodology
 - Fixed Width Line Transect for *T. maxima*
- Mantle
- Reproduction and Growth
 - Growth of giant clam *T. maxima* in Lakshadweep Archipelago
 - Size
 - Population structure of giant clam *Tridacna maxima* in Lakshadweep Archipelago

- ECOLOGY of *T. maxima*
 - Reef Canopy Distribution
 - Microhabitat
 - Role of Herbivory
 - Benthos studies at Agatti and Kavaratti
 - Habitat requirements of *T. maxima* in Lakshadweep archipelago
 - Substrate preference by *T. maxima*
 - Anchorage site selection
 - Attachment
 - Placement
 - Habitat Use Vs Availability
 - Anchorage profile of *T. maxima*

- Population Dynamics of *T. maxima*
 - Density
 - Recruitment
 - Mortality
 - Population projection of giant clam

- Conservation Issues of Giant Clams
 - Trade in giant clams
 - Removal of *Porites lutea*
 - Disease to massive corals or *Porites lutea*
 - Bioeroders
 - Dredging and subsequent sedimentation
 - Low adult density
 - El Niño and coral bleaching
